

# AI-Driven Development – 30-Day Challenge-Task-7

## What is SPECKit Plus?

**SPECKit Plus** is a structured AI-native project development framework that guides students and developers from the idea stage to final implementation. It provides a clear, step-by-step process to document requirements, design solutions, break down tasks, and build AI-powered applications in a systematic and professional way.

By following SPECKit Plus, teams stay organized, focused, and aligned on goals throughout the project lifecycle.

## Short Answers for the 5 SPECKit Plus Concepts

### 1./constitution

The **Constitution Phase** defines the foundation of the project. It includes the vision, purpose, problem statement, and overall mission. This phase ensures clarity about why the project exists and what outcome it aims to achieve.

### 2. /specify

The **Specify Phase** documents the complete requirements of the system. It includes functional requirements, constraints, acceptance criteria, and expected behaviors. This phase converts the project idea into a precise, detailed specification.

### 3. /plan

The **Plan Phase** outlines how the project will be executed. It includes workflows, architecture, strategies, and step-by-step planning. This phase ensures that development follows an organized and efficient path.

### 4. /tasks

The **Tasks Phase** breaks the plan into small, actionable tasks. Each task becomes a clear unit of work with specific objectives. It helps track progress and ensures every part of the plan is implemented properly.

### 5 /implement

The **Implement Phase** is where the actual building takes place. Developers write code, integrate components, complete tasks, and test the application. This phase transforms all the previous phases into a working final product.
